npm WARN config global '--global', '--local' are deprecated. Use '--location=global' instead.
This utility will walk you through creating a package.json file.
It only covers the most common items, and tries to guess sensible defaults.
```

```
See 'npm help init' for definitive documentation on these fields
and exactly what they do.
```

```
Use 'npm install <pkg>' afterwards to install a package and
save it as a dependency in the package.json file.
```

```
Press ^C at any time to quit.
